

COMPLETE ASSESSMENT OF MY TASK

DESCRIPTION:

I had built a C++ program to send Mail. I have used smtp server which will work in all the mail domain. If the from address contain “@gmail.com” the smtp server must be Gmail and likewise if the from address contain “@outlook.com” the smtp server must be outlook. Likewise I have written a code in C++ application

INPUT what I gave is

Sender mail id:

Password:

From address:

To address:

Subject:

Body:

These are the inputs that I gave in text document. And these text documents I have called in Mail.h file.

OUTPUT is:

mrithika312@gmail.com

to bcc: poojasanthi2002 ▾

Good morning sir/madam

As i have laser treatment,i cant able to attend the class.Please apolozize me and give me some slot to attend the class.

Thankyou.
